

Online Securities Trading Activity

(Data on sale purchase of stocks, etc. through online securities trading)

(Purpose)

Online trading is a relatively new trading scheme to the industry. Because there is almost no statistical data on online trading, the JSDA conducts monthly surveys on the value of brokerage transactions, the margin transactions balance at the end of the month, and the number of online accounts, etc., for the previous month and discloses the survey results. The JSDA publicizes its data on online trading and other information with a view to providing investors and securities firms with necessary information and establishing an easy-to-use market.

(Definitions)

“Accounts” refer to transaction accounts used for online trading.

(Data Source)

Online Stock Trading and Other Data are gathered from Regular Members providing online trading services that agree with the purpose of data collection and volunteer to participate. The data for each month are publicized on the JSDA’s website at the end of the following month. When the end of the month falls on a holiday, the data are publicized on the following business day.

(Notes for Users)

Since the publicized data are prepared only from member firms that volunteer to provide the information, the data do not fully reflect the overall online stock trading market.

(Publication Timing)

These statistics are published on the end of the following month on the JSDA's website. When the end of the month falls on a holiday, the data is announced on the following business day.

These explanatory materials are intended to provide assistance to non-professionals using the statistical data provided by the JSDA in understanding the specialized vocabulary used in statistics. The definitions and other explanations used are not necessary based on laws or other regulations.
